

AKTU

B.Tech 1st Year

Environment & Ecology

ONE SHOT Revision

Unit-5

Environmental Protection

Notes | PYQs

M S Tomar Sir

Environment and Ecology

AKTU Syllabus : Unit-5

Environmental Protection:-

- Environmental Protection Act 1986
- Initiatives by Non Governmental Organizations (NGO's)

Human Population and the Environment:-

- Population growth
- Environmental Education
- Women Education

Environment and Ecology

UNIT-5 AKTU PYQs

AKTU 2023 – 24 Odd Sem(1st Sem)

Q.1	<i>What are the main provisions of the Environment Protection Act of 1986?</i>	2 Marks
Q.2	<i>Write the need of environment education.</i>	2 Marks
Q.3	<i>Write causes of population explosion. Also explain its negative impact on environment.</i>	7 Marks
Q.4	<i>Describe the importance of women education.</i>	7 Marks
Q.5	<i>Explain activities undertaken by NGOs and also write the issues with NGOs.</i>	7 Marks

Environment and Ecology

UNIT-5 AKTU PYQs

AKTU 2022 – 23 Even Sem(2nd sem)

Q.1	<i>What is Environmental Education? How it can protect the environment?</i>	2 Marks
Q.2	<i>Discuss the strategy and policy adopted by Government of India for the development of Women Education. Briefly describe the various schemes launched for women education.</i>	7 Marks
Q.3	<i>What do you mean by the term NGO? Discuss the initiatives taken by NGO's in environmental protection.</i>	7 Marks
Q.4	<i>Briefly discusses the salient features of Environmental Protection Act 1986. Discuss the role of various acts introduced for protection of environment.</i>	7 Marks

Environment and Ecology

UNIT-5 AKTU PYQs

AKTU 2022 – 23 Odd Sem(1st Sem)

Q.1	<i>Explain the term 'population explosion'. Discuss its effects.</i>	2 Marks
Q.2	<i>Critically discuss the role of Government in environmental protection.</i>	2 Marks
Q.3	<i>"Environment education can play an important role in environmental protection". Comment on the statement.</i>	7 Marks
Q.4	<i>Discuss in brief, the salient features of the Water (Prevention and Control of Pollution) Act, 1984</i>	7 Marks
Q.5	<i>Discuss in brief, the salient features of the Air pollution (Prevention and Control of Pollution) Act, 1981.</i>	7 Marks

Environmental Protection

- Environmental protection refers to the practice of **safeguarding** and **preserving the natural world**, including **land, air, water, and ecosystems**, to ensure a **sustainable** and healthy **environment** for current and future generations.
- It involves various **efforts** aimed to **reducing pollution**, **conserving resources**("संसाधनों का संरक्षण"), and **promoting biodiversity**("जैव विविधता").

Environmental Protection Acts

In India, several **legislations** have been enacted to protect the environment and **ensure sustainable development**.

- Wildlife Protection Act, 1972
- Water (Prevention and Control of Pollution) Act, 1974
- Air (Prevention and Control of Pollution) Act, 1981
- Forest (Conservation) Act, 1980
- Environment Protection Act, 1986

Environment Protection Act, 1986

AKTU 2023-24 Odd, 2022-23 Even

BHOPAL 1984 WORLD'S WORST INDUSTRIAL DISASTER

On the night of 3 Dec 1984, thousands died as 30 tonnes of highly toxic Methyl Isocyanate gas leaked from the Union Carbide factory in Bhopal, Madhya Pradesh

Environment Protection Act, 1986

AKTU 2023-24 Odd, 2022-23 Even

- The Environment (Protection) Act, 1986 is a crucial environmental legislation in India.
- It was enacted with the primary objective of providing the framework for the protection and improvement of the environment.
- The act empowers the central government to take measures to address environmental issues and sets the stage for the formulation and implementation of **environmental policies and programs**.

These are the following features of the Environment (Protection) Act, 1986:

1. Objective: The main aim of the act is to safeguard the environment and prevent hazards to human beings, other living creatures, plants, and property.

2. Powers of the Central Government:

- The act grants extensive powers to the central government to take measures for protecting and improving the quality of the environment.
- This includes setting **standards for emissions and discharges, regulating locations of industries, and managing hazardous substances**.

3. Environmental Standards:

- The act allows the central government to prescribe standards for environmental pollutants, noise levels, and quality of air and water.
- These standards serve as benchmarks for various activities to ensure they do not harm the environment.

4. Environmental Impact Assessment (EIA):

- The act provides for the assessment of the potential environmental impacts of certain projects before they are undertaken.
- This Environmental Impact Assessment (EIA) process helps in making informed decisions about the approval of projects with significant environmental implications.

5. Regulation of Hazardous Substances:

- The act empowers the central government to regulate the handling, transportation, and disposal of hazardous substances.
- It also allows for the prohibition and restriction of the handling of such substances.

6. Prohibition and Restriction of Industries:

→ The act gives the central government the authority to prohibit or restrict the location of industries and the carrying on of certain processes or operations that are deemed environmentally harmful.

7. Penalties and Offenses:

→ The act includes provisions for **penalties** and **imprisonment**("क़ादिरास") in case of violation of its provisions.

Disadvantages of Environment Protection Act, 1986

- It is highly centralized (Most power with central government).
- Lack of public participation.
- Does not cover all forms of pollutions.
- Not effectively enforced in many parts of country.

The Environment (Protection) Act, 1986, serves as a foundational law for environmental governance in India, providing the legal basis for addressing various environmental issues and promoting sustainable development.

Water (Prevention and Control of Pollution) Act, 1974

AKTU 2022-23 Odd Sem

1984

Objective: The primary aim is to prevent and control water pollution in India.

These are the following features of the Water (Prevention and Control of Pollution) Act, 1974:

1. Establishment of Boards:

- Formation of the **Central Pollution Control Board (CPCB)** at the national level.
- Establishment of **State Pollution Control Boards (SPCBs)** at the state level.

2. Functions of the Boards:

- Implementation of policies and programs for the prevention and control of water pollution.
- Advising governments on water pollution issues.
- Setting standards for the discharge of effluents("उत्सर्जन" या "अपशिष्ट जल") into water bodies.
- Inspecting water treatment plants and industrial units.

Water (Prevention and Control of Pollution) Act, 1974

AKTU 2022-23 Odd Sem

1984

Objective: The primary aim is to prevent and control water pollution in India.

These are the following features of the Water (Prevention and Control of Pollution) Act, 1974:

1. Establishment of Boards:

- Formation of the **Central Pollution Control Board (CPCB)** at the national level.
- Establishment of **State Pollution Control Boards (SPCBs)** at the state level.

2. Functions of the Boards:

- Implementation of policies and programs for the prevention and control of water pollution.
- Advising governments on water pollution issues.
- Setting standards for the discharge of effluents("उत्सर्जन" या "अपशिष्ट जल") into water bodies.
- Inspecting water treatment plants and industrial units.

3. Consent to Discharge:

→ Mandatory requirement for industries to obtain **consent from SPCBs** to discharge sewage or trade effluents.

4. Penalties for Non-compliance:

- Imposition of **fin**es and **imprisonment** for violators of the Act.
- Authority to close, prohibit, or regulate any industry or operation causing water pollution.

5. Inspection and Monitoring:

- Power to inspect any plant, factory, or industry for ensuring compliance with the Act.

6. Funding and Grants:

- Provision for financial assistance and grants to SPCBs for their functioning.

Water (Prevention and Control of Pollution) Amendment Act, 1984

AKTU 2022-23 Odd Sem

These are the following features of the Water (Prevention and Control of Pollution) Act, 1984:

Strengthening of Boards:

→ Enhancement of powers and functions of the CPCB and SPCBs.

Revised Penalties:

→ Increased penalties for violations.

→ More emphasis on enforcing compliance.

Citizen Participation:

→ Provision for individuals to file complaints and initiate legal proceedings against polluters.

Legal and Judicial Support:

→ Enabling provisions for the judiciary to take a proactive role in enforcing the Act.

Enhanced Monitoring:

→ Greater emphasis on **regular monitoring and inspection** of industries and water bodies.

Air (Prevention and Control of Pollution) Act, 1981

AKTU 2022-23 Odd Sem

The Air (Prevention and Control of Pollution) Act, 1981 is an important environmental legislation in India that was enacted to address the growing concerns related to air pollution.

Objective: The primary objective of the Act is to prevent and control air pollution.

These are the following features of the Air (Prevention and Control of Pollution) Act, 1981:

1. Regulatory Authorities:

- The Act provides for the establishment of State Pollution Control Boards (SPCBs) at state level and the Central Pollution Control Board (CPCB) at the central level.
- These boards are responsible for implementing and enforcing the provisions of the Act.

2. Pollution Control Measures:

- The Act **empowers** the pollution control boards to take measures for the prevention and control of air pollution.
- They can prescribe standards for emissions, inspect industrial plants, and issue directives to industries which do not follow the prescribed standards.

3. Consent Mechanism:

- Industries and other sources of air pollution are required to obtain consent from the pollution control boards before initiating any operations.
- The consent mechanism helps in ensuring that industries follow the standards set by the regulatory authorities.

4. Monitoring and Analysis:

- The Act empowers the pollution control boards to collect and **Circulate information** related to **air quality**.
- They can conduct ambient air quality monitoring, industrial emissions monitoring, and other relevant studies to analyze the level of air pollution.

5. Penalties and Offenses:

- The Act specifies penalties for violation of its provisions.
- It outlines offenses and prescribes punishments, including fines and imprisonment, for those who violate the regulations and standards set by the Act.

6. Public Awareness:

The Act emphasizes the importance of public participation in environmental protection. It encourages the spread of information regarding air pollution and its control to the public.

The Air (Prevention and Control of Pollution) Act, 1981, plays a crucial role in safeguarding the environment and public health by regulating and controlling air pollution in India.

The regulatory mechanisms established by the Act aim to strike a balance between industrial development and environmental conservation.

The Wildlife Protection Act, 1972

These are the following features of the Wildlife Protection Act, 1972 :

1. Wildlife Conservation Strategy:

- The act provides a framework for the development and implementation of a complete wildlife conservation strategy.
- It emphasizes the protection of biodiversity and the ecological balance.

2. Protected Areas:

- The act empowers the government to declare specific areas as **national parks** and **closed areas for the protection of wildlife**.
- These areas are essential for the conservation of various species and their habitats.

3. Prohibition of Hunting:

- The act prohibits the hunting of specified wild animals and birds.
- It categorizes animals into Schedule I, II, III, and IV, with varying degrees of protection.
- Hunting or poaching of animals listed in Schedule I is strictly prohibited.

4. Regulation of Trade and Commerce:

- The act regulates the trade and commerce of wildlife.
- It prohibits the sale, purchase, or possession of trophies, animal articles, and the specified animals and plants without proper permission.

5. Appointment of Wildlife Wardens:

- The act provides for the appointment of Wildlife Wardens at the state and central levels.
- These officers are responsible for the protection of wildlife and the enforcement of the provisions of the act.

6. Project Elephant and Project Tiger:

→ The act led to the initiation of specific conservation projects, such as Project Elephant and Project Tiger, to focus on the conservation of these flagship species and their habitats.

7. Penalties and Punishments:

→ The act prescribes penalties and punishments for offenses such as hunting, poaching, and illegal trade of wildlife.

→ Penalties can include imprisonment and fines, depending on the severity of the offense.

The Wildlife Protection Act, 1972 has played a crucial role in the conservation of India's diverse wildlife.

It reflects the country's commitment to preserving its rich biodiversity and maintaining ecological balance.

Forest (Conservation) Act, 1980

- The Forest (Conservation) Act, 1980 is an important environmental legislation in India that focuses on the **conservation of forests and biodiversity**.
- The Act was enacted to control and regulate the diversion of forest lands for non-forest purposes.
- It aims to ensure the sustainable use of forest resources and protect the ecological balance.

These are the following features of the Forest (Conservation) Act, 1980:

1. Prior Approval for Diversion:

- The Act requires that any proposal to use forest land for non-forest purposes, such as mining, industry, or infrastructure projects, must take **prior approval** from the **Central Government**.
- This is done to minimize the adverse impact on the environment and biodiversity.

2. Role of Central Government:

- The Central Government, through the Ministry of Environment, Forest and Climate Change, plays a crucial role in granting or rejecting proposals for the diversion of forest land.
- The decision is made after considering the environmental impact and the availability of alternative non-forest land.

3. Compensatory Afforestation:

- The Act mandates compensatory afforestation as a condition for the approval of forest land diversion.
- In cases where forest land is used for non-forest purposes, an equivalent area of non-forest land must be afforested to compensate for the loss of forest cover.

4. Role of State Governments:

- While the Central Government has the authority to approve or reject proposals, the State Governments play a significant role in the initial processing of proposals and providing relevant information for decision-making.

5. Penalties for Violation:

- The Act specifies penalties for violation, including fines and imprisonment, for individuals or entities that violate its provisions.

6. Conservation of Ecologically Sensitive Areas:

- The Act emphasizes the importance of protecting ecologically sensitive areas and wildlife habitats.
- Proposals for diverting forest land in such areas are subject to even greater scrutiny.

The Forest (Conservation) Act, 1980, is a crucial tool in India's efforts to balance developmental activities with the conservation of its rich forest heritage and biodiversity. It reflects the country's commitment to sustainable development and environmental protection.

Non Governmental Organizations (NGO's)

AKTU 2022-23 Even

- The term "NGO" stands for Non-Governmental Organization.
- NGOs are **private, non-profit organizations** that operate independently under government control.
- They are often driven by a mission to address social, cultural, environmental, or humanitarian issues.
- NGOs can take various forms, including community-based organizations, research institutions, and charitable foundations.

Several NGOs are actively involved in conserving natural resources, promoting sustainable development, and addressing environmental challenges.

These are the following common initiatives taken by NGOs in environmental protection:

1. Protecting Wildlife:

Example: The **World Wildlife Fund (WWF)** helps protect endangered animals like pandas, tigers, and elephants.

Initiative: They create safe areas where these animals can live without the threat of being hunted or losing their homes to deforestation.

2. Fighting Climate Change:

Example: **Greenpeace** works to stop climate change by encouraging people and companies to use clean energy, like solar and wind power, instead of coal and oil.

Initiative: They run campaigns to educate people about the dangers of climate change and push governments to pass laws that protect the environment.

3. Supporting Sustainable Farming:

Example: The **Nature Conservancy** helps farmers grow crops in ways that don't harm the environment.

Initiative: They teach farmers how to use water efficiently and keep the soil healthy, so they can grow food without damaging the earth.

4. Teaching About the Environment:

Example: **Earthwatch** organizes trips where people can learn about nature and help with scientific research.

Initiative: They involve volunteers in activities like tracking wildlife or studying the effects of climate change, so they can help scientists understand these issues better.

5. Cleaning Up Pollution:

Example: **Ocean Conservancy** focuses on cleaning up the oceans, especially getting rid of plastic waste.

Initiative: They organize beach clean-ups and work on projects to reduce the amount of plastic that ends up in the sea, protecting marine life..

6. Promoting Sustainable Agriculture:

Example: **Kisan Mitra Foundation** supports farmers in adopting sustainable farming practices.

Initiative: They provide training and resources to farmers to help them use organic farming techniques and manage water resources more effectively.

7. Cleaning Up Rivers:

Example: **Ganga Action Parivar** focuses on cleaning and restoring the Ganga River.

Initiative: They organize river clean-ups, work on reducing industrial pollution, and promote community involvement in protecting the river.

Why NGOs are Important ?

- NGOs are crucial because they help address environmental challenges that are sometimes too big for the government to tackle alone.
- They bring attention to important issues, work directly on the ground to solve problems, and involve local communities in conservation efforts.
- Despite challenges like limited resources, their work helps make a significant positive impact on environment.

The term "**population explosion**" refers to a rapid and exponential increase in the human population over a relatively short period.

Negative Effects of Population Explosion:

- Strain on Resources
- Environmental Degradation
- Pressure on Infrastructure
- Unemployment and Poverty
- Healthcare Challenges
- Education Issues
- Global Impact

Effects of population growth on the environment:

1. Resource Depletion:

- Rapid population growth leads to increased demand for natural resources such as water, land, forests, minerals, and fossil fuels.
- Over-exploitation of these resources can result in habitat destruction and a decline in biodiversity.

2. Land Use Change and Urbanization:

- Population growth often drives urbanization and expansion of infrastructure.
- Agricultural lands are converted into urban areas, leading to habitat loss, soil erosion, etc.

3. Deforestation:

- The need for land for agriculture, housing, and industry contributes to deforestation.
- Deforestation impacts biodiversity, disrupts ecosystems, and contributes to climate change by reducing carbon sinks.

4. Air and Water Pollution:

- Larger populations generate more waste, leading to increased air and water pollution.
- Industrial activities, urbanization, and improper waste disposal can contaminate air and water resources, affecting human health and ecosystems.

5. Climate Change:

- The cumulative impact of greenhouse gas emissions from a growing population contributes to climate change.
- Increased energy consumption, deforestation, and industrial activities release carbon dioxide and other greenhouse gases into the atmosphere.

6. Loss of Biodiversity:

- Habitat destruction, pollution, and resource exploitation associated with population growth contribute to the loss of biodiversity.

7. Water Scarcity:

- Rising populations increase demand for water resources, leading to water stress and scarcity.
- Over-extraction of groundwater, contamination of water bodies, and inefficient water use contribute to water scarcity issues.

8. Land Degradation:

- Intensive agricultural practices to feed growing populations can lead to soil degradation.
- Soil erosion, loss of soil fertility, and desertification are consequences of unsustainable land use.

9. Energy Consumption:

- The increasing demand for energy, often derived from fossil fuels, contributes to environmental degradation.
- Extracting and burning fossil fuels release pollutants and greenhouse gases, contributing to air pollution and climate change.

10. Social and Economic Impacts:

- High population growth can strain social and economic systems, leading to challenges such as poverty, inadequate infrastructure, and increased competition for resources.

- Environmental Education is the process of teaching and learning about the natural environment and the human impact on it.
- It aims to develop an understanding of the environment, its functions, and the interconnections between various natural and human systems.
- Environmental education encompasses a wide range of topics, including ecology, biodiversity, sustainability, pollution, and climate change.

Objectives of Environmental Education:

- 1.Awareness:** Increase awareness about environmental issues and challenges.
- 2.Knowledge:** Provide knowledge about the environment and related problems.
- 3.Attitudes:** Foster attitudes of concern for the environment and motivation to improve or maintain environmental quality.
- 4.Skills:** Develop skills to identify and address environmental problems.
- 5.Participation:** Encourage active participation in environmental protection and improvement activities.

How Environmental Education Can Protect the Environment?

1. Promoting Sustainable Practices:

- Educates individuals and communities on sustainable living practices, such as reducing waste, recycling, conserving water, and using energy efficiently.
- Encourages the adoption of renewable energy sources and sustainable agricultural practices.

2. Influencing Policy and Decision-Making:

- Informed citizens are more likely to advocate for environmental policies and regulations.
- Helps shape public opinion and influence policymakers to enact and enforce laws that protect the environment.

4. Enhancing Scientific Understanding:

- Provides a scientific basis for understanding environmental processes and issues.
- Encourages research and innovation in environmental science and technology.

5. Building Community Resilience:

- Educates communities on how to adapt to and mitigate the impacts of climate change.
- Promotes community-based environmental monitoring and conservation projects.

6. Supporting Conservation Efforts:

- Raises awareness about the importance of biodiversity and the need to protect endangered ("संकटग्रस्त") species and habitats.
- Encourages participation in conservation programs and initiatives.

7. Reducing Pollution:

- Educates people about the sources and effects of pollution.
- Promotes behaviors that reduce pollution, such as minimizing the use of plastics, proper disposal of hazardous materials, and reducing carbon footprints.

8. Empowering Youth:

- Engages young people in environmental activities and education, fostering a new generation of environmentally conscious citizens.
- Provides opportunities for youth to participate in environmental projects and initiatives.

9. Encouraging Collaborative Efforts:

- Promotes collaboration between governments, non-governmental organizations (NGOs), educational institutions, and the private sector.
- Facilitates the sharing of knowledge, resources, and best practices in environmental protection.

10. Creating Economic Opportunities:

- Promotes green jobs and careers in environmental fields.
- Supports the development of sustainable businesses and industries.

Challenges in Environmental Education

These are following education challenges that can impact its effectiveness and reach.

- **Limited Awareness and Understanding**
- **Inadequate Funding**
- **Insufficient Integration into Formal Education**
- **Teacher Training and Capacity**
- **Lack of Access to Education**
- **Cultural and Linguistic Diversity**
- **Short-Term Focus**
- **Behavioural Change**
- **Political Interests**
- **Monitoring and Evaluation**

Women's education plays a critical role in environmental sustainability and the protection of natural resources. Educated women are more likely to understand and advocate for environmental issues, leading to positive impacts on both local and global ecosystems.

How Women's Education Benefits the Environment:

1. Empowerment and Leadership:

- Educated women are more likely to take on leadership roles in environmental conservation and advocacy.
- They can influence community decisions regarding the use of natural resources and the implementation of sustainable practices.

2. Sustainable Resource Management:

- Women, particularly in rural areas, are often the primary managers of household resources like water, fuel, and food.
- Education enables women to adopt and promote sustainable practices in agriculture, water conservation, and energy use, reducing environmental degradation.

3. Population Growth and Environmental Impact:

- Education, particularly in reproductive health, empowers women to make informed decisions about family planning.
- Lower fertility rates contribute to reduced population pressure on natural resources, which is crucial for environmental sustainability.

4. Climate Change Resilience:

- Educated women are better equipped to understand and respond to the impacts of climate change.
- They can participate in and lead climate adaptation and mitigation efforts, such as disaster preparedness and sustainable agriculture.

5. Health and Environment:

- Educated women are more aware of the health impacts of environmental pollution and can advocate for cleaner environments.
- They are more likely to adopt eco-friendly practices that reduce exposure to harmful pollutants, benefiting both their families and the environment.

6. Economic Empowerment and Green Jobs:

- Education increases women's access to economic opportunities, including in the growing green economy.
- Women can contribute to environmental protection through careers in sustainable development, renewable energy, and environmental science.

7. Intergenerational Impact:

- Educated mothers are more likely to educate their children about the importance of environmental stewardship.
- This creates a positive cycle where future generations are more environmentally conscious and proactive in protecting the environment.

8. Community Development:

- Women's education fosters community engagement and collective action in environmental conservation efforts.
- Educated women can mobilize communities to take part in tree planting, waste management, and conservation projects.

Strategy and Policy Adopted by the Government of India for the Development of Women Education

AKT 2022-23 Even Sem

- The Government of India has recognized the importance of women's education as a critical factor in national development.
- Over the years, several strategies and policies have been adopted to promote the education for women and girls across the country.

1. National Policy on Education (NPE), 1986 and Program of Action (POA), 1992:

- The NPE, 1986, laid the foundation for promoting education among women and girls, focusing on eliminating gender disparities in education.
- The POA, 1992, reinforced the commitment to achieving gender equality in education by providing special support to girls, particularly in rural and disadvantaged communities.

2. Sarva Shiksha Abhiyan (SSA):

- Launched in 2001, the SSA is a flagship program aimed at universalizing elementary education for children aged 6-14 years.
- It places a strong emphasis on the education of girls, especially from marginalized groups, by providing incentives such as free textbooks, uniforms, and mid-day meals.
- The program also focuses on creating girl-friendly school environments and improving retention rates for girls.

3. Beti Bachao Beti Padhao (BBBP):

- Introduced in 2015, the BBBP scheme addresses the declining child sex ratio and promotes the education and empowerment of the girl child.
- It involves awareness campaigns and improving access to education for girls.
- The scheme emphasizes the importance of girls' education as a means of empowering them and ensuring their participation in the country's development.

4. Mahila Samakhya Programme:

- Launched in 1989, the Mahila Samakhya program is an empowerment initiative focused on educating and organizing rural women to address their socio-economic challenges.
- The program operates in several states and aims to create awareness among women about their rights, including the right to education.
- It encourages women to participate in local governance, demand access to education, and work towards community development.

5. Digital Saksharata Abhiyan (DISHA):

- The DISHA program is part of the Digital India initiative, aiming to promote digital literacy among women and girls.
- It provides training in digital skills, enabling women to access educational resources online and participate in the digital economy.
- The program also focuses on enhancing digital access in rural areas, ensuring that girls can continue their education through online platforms.
